DESCRIPTION

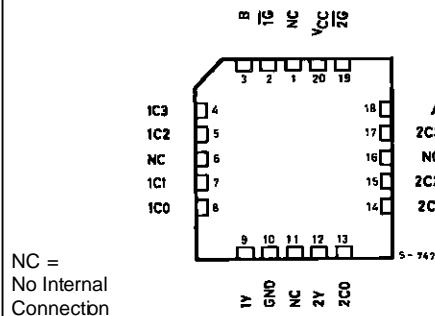

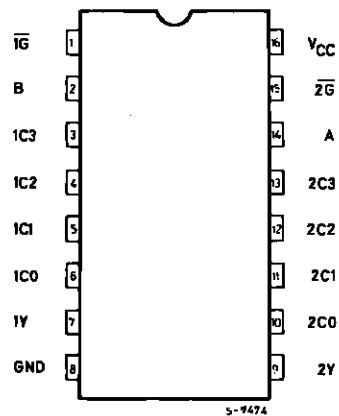

The M54/74HC153 and M54/74HC253 are high speed CMOS DUAL 4-CHANNEL MULTIPLEXERS fabricated with silicon gate C²MOS technology. Both achieve high speed operation, similar to equivalent LSTTL, while maintaining the CMOS low power dissipation.

The designer has a choice of complementary output (HC153) and 3-state output (HC253).

Each of these data (1C0-1C3, 2C0-2C3) is selected by the two address inputs A and B.

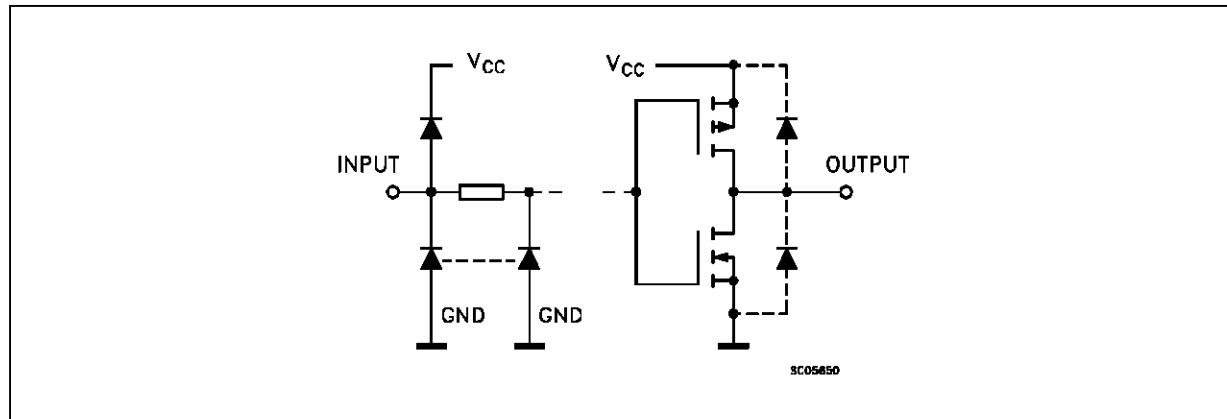

Separate strobe inputs ($1\bar{G}$, $2\bar{G}$) are provided for each of the two four-line sections. The strobe input (\bar{G}) can be used to inhibit the data output ; the output of HC 153 is fixed at a low level and the output of HC253 is a high impedance, while the strobe input is held low.

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
